Report Server Web Service for Report Management for Native Mode: ReportService2005

Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation (“this documentation”) for protocols, file formats, data portability, computer languages, and standards support. Additionally, overview documents cover inter-protocol relationships and interactions.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you can make copies of it in order to develop implementations of the technologies that are described in this documentation and can distribute portions of it in your implementations that use these technologies or in your documentation as necessary to properly document the implementation. You can also distribute in your implementation, with or without modification, any schemas, IDLs, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications documentation.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that might cover your implementations of the technologies described in the Open Specifications documentation. Neither this notice nor Microsoft's delivery of this documentation grants any licenses under those patents or any other Microsoft patents. However, a given Open Specifications document might be covered by the Microsoft [Open Specifications Promise](#) or the [Microsoft Community Promise](#). If you would prefer a written license, or if the technologies described in this documentation are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.
- **License Programs.** To see all of the protocols in scope under a specific license program and the associated patents, visit the [Patent Map](#).
- **Trademarks.** The names of companies and products contained in this documentation might be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights. For a list of Microsoft trademarks, visit www.microsoft.com/trademarks.
- **Fictitious Names.** The example companies, organizations, products, domain names, email addresses, logos, people, places, and events that are depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

Reservation of Rights. All other rights are reserved, and this notice does not grant any rights other than as specifically described above, whether by implication, estoppel, or otherwise.

Tools. The Open Specifications documentation does not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments, you are free to take advantage of them. Certain Open Specifications documents are intended for use in conjunction with publicly available standards specifications and network programming art and, as such, assume that the reader either is familiar with the aforementioned material or has immediate access to it.

Support. For questions and support, please contact dochelp@microsoft.com.

Revision Summary

Date	Revision History	Revision Class	Comments
8/7/2009	0.1	Major	First release.
11/6/2009	0.1.1	Editorial	Changed language and formatting in the technical content.
3/5/2010	0.2	Minor	Clarified the meaning of the technical content.
4/21/2010	1.0	Major	Updated and revised the technical content.
6/4/2010	1.1	Minor	Clarified the meaning of the technical content.
9/3/2010	1.2	Minor	Clarified the meaning of the technical content.
2/9/2011	1.2	None	No changes to the meaning, language, or formatting of the technical content.
7/7/2011	1.2	None	No changes to the meaning, language, or formatting of the technical content.
11/3/2011	1.2	None	No changes to the meaning, language, or formatting of the technical content.
1/19/2012	1.2	None	No changes to the meaning, language, or formatting of the technical content.
2/23/2012	1.2	None	No changes to the meaning, language, or formatting of the technical content.
3/27/2012	1.2	None	No changes to the meaning, language, or formatting of the technical content.
5/24/2012	1.2	None	No changes to the meaning, language, or formatting of the technical content.
6/29/2012	1.2	None	No changes to the meaning, language, or formatting of the technical content.
7/16/2012	1.2	None	No changes to the meaning, language, or formatting of the technical content.
10/8/2012	1.2	None	No changes to the meaning, language, or formatting of the technical content.
10/23/2012	1.2	None	No changes to the meaning, language, or formatting of the technical content.
3/26/2013	1.2	None	No changes to the meaning, language, or formatting of the technical content.
6/11/2013	1.2	None	No changes to the meaning, language, or formatting of the technical content.
8/8/2013	1.2	None	No changes to the meaning, language, or formatting of the technical content.
12/5/2013	1.2	None	No changes to the meaning, language, or formatting of the technical content.
2/11/2014	2.0	Major	Updated and revised the technical content.

Date	Revision History	Revision Class	Comments
5/20/2014	2.0	None	No changes to the meaning, language, or formatting of the technical content.
5/10/2016	3.0	Major	Significantly changed the technical content.
8/16/2017	4.0	Major	Significantly changed the technical content.

1 Introduction

The Report Server Web Service for Report Management for Native Mode: ReportService2005 protocol is an API protocol that is provided by the ReportService2005 web service for managing objects and settings on a **report server** that is configured for native mode.

Sections 1.5, 1.8, 1.9, 2, and 3 of this specification are normative. All other sections and examples in this specification are informative.

1.1 Glossary

This document uses the following terms:

report server: A location on the network to which clients can connect by using SOAP over HTTP or SOAP over HTTPS to publish, manage, and execute reports.

SOAP header: A mechanism for implementing extensions to a **SOAP message** in a decentralized manner without prior agreement between the communicating parties. See [\[SOAP1.2-1/2007\]](#) section 5.2 for more information.

SOAP message: An XML document consisting of a mandatory SOAP envelope, an optional **SOAP header**, and a mandatory SOAP body. See [\[SOAP1.2-1/2007\]](#) section 5 for more information.

WSDL message: An abstract, typed definition of the data that is communicated during a **WSDL operation** [\[WSDL\]](#). Also, an element that describes the data being exchanged between web service providers and clients.

WSDL operation: A single action or function of a web service. The execution of a WSDL operation typically requires the exchange of messages between the service requestor and the service provider.

XML namespace: A collection of names that is used to identify elements, types, and attributes in XML documents identified in a URI reference [\[RFC3986\]](#). A combination of XML namespace and local name allows XML documents to use elements, types, and attributes that have the same names but come from different sources. For more information, see [\[XMLNS-2ED\]](#).

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as defined in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

Links to a document in the Microsoft Open Specifications library point to the correct section in the most recently published version of the referenced document. However, because individual documents in the library are not updated at the same time, the section numbers in the documents may not match. You can confirm the correct section numbering by checking the [Errata](#).

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information.

1.3 Overview

The ReportService2005 web service protocol that is described in this document [<1>](#) provides methods for managing objects and settings on a **report server** [\[MSDN-SSRS\]](#) that is configured for native

mode [\[MSDN-SSMode\]](#). Objects and settings that can be managed by the protocol include the following:

- Security tasks, roles, and policies
- Data source connections and credentials
- Parameters for reports
- Report execution and caching
- Report history snapshots
- Schedules
- Subscriptions and deliveries of reports
- Linked reports
- Server system properties

First, the client establishes a connection with the server. After the connection is established by using the HTTP [\[RFC7230\]](#) or HTTPS [\[RFC2818\]](#) protocol, **SOAP messages** [\[SOAP1.1\]](#) [\[SOAP1.2-1/2007\]](#) are used to communicate between the client and the server.

The ReportService2005 web service protocol uses the security facilities that are built into HTTP or HTTPS for authentication and identification and for channel encryption negotiation. The protocol uses the facilities that are built into SOAP for specification of requests from client to server and for returning data from the server to the client. The following diagram depicts a (simplified) typical flow of communication in the protocol.

Figure 1: Communication flow for ReportService2005

Each method in the protocol is a SOAP operation that accepts a set of parameters as a SOAP request and returns a set of values as a SOAP response. The client sends a request to the server through a SOAP request message, and the server sends return values to the client through a SOAP response message.

The following procedure describes a simple example client/server exchange for creating a report.

1. The client calls the **CreateReport** method, which accepts the following parameters:
 - **Report:** The name of the new report
 - **Parent:** The full path name of the parent folder to which to add the report
 - **Overwrite:** A **Boolean** expression that indicates whether an existing report that has the same name in the specified location is to be overwritten
 - **Definition:** The report definition to publish to the report server
 - **Properties:** An array of **Property** objects [\[MSDN-PropertyClass\]](#) that contains the property names and values to set for the report

- The server creates the report, modifies the **ModifiedBy** and **ModifiedDate** properties of the parent folder, and then returns an array of **Warning** objects [\[MSDN-WarningClass\]](#) to the client that describe any warnings that occurred when the report definition was validated.

Note If errors occur, the report is not created.

1.4 Relationship to Other Protocols

This protocol uses SOAP over HTTP or HTTPS as shown in the following layering diagram.

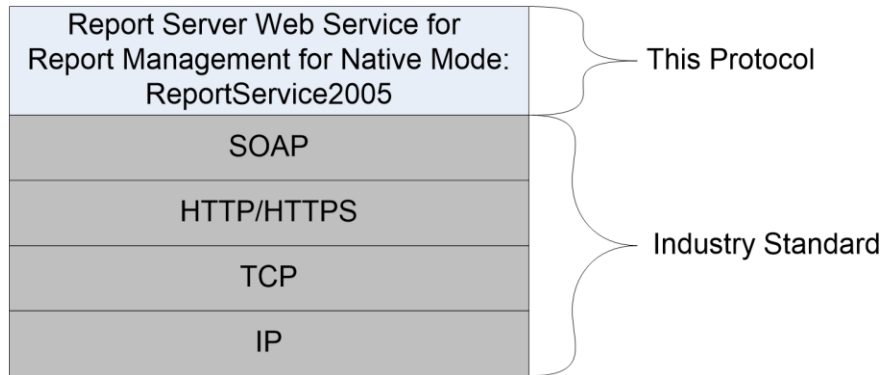

Figure 2: SOAP over HTTP or HTTPS

1.5 Prerequisites/Preconditions

The ReportService2005 web service operates against a URL. The URL is identified by protocol clients. The protocol server endpoint is formed by appending `"/ReportService2005.asmx"` to the URL, as in the following example:

`http://www.contoso.com/ReportServer/ReportService2005.asmx`

It is assumed that authentication has been performed by the underlying protocol. The account that accesses this web service is assigned with proper permissions to the site and its items.

1.6 Applicability Statement

The ReportService2005 web service enables client applications to create and manage objects and settings on a **report server**.

1.7 Versioning and Capability Negotiation

This document covers versioning issues in supported transports. The ReportService2005 web service protocol uses multiple transports with SOAP as specified in section [2.1](#).

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.

2 Messages

2.1 Transport

Protocol servers MUST support SOAP over HTTP and MUST support SOAP over HTTPS for securing communication with clients.

Protocol messages MUST be formatted as specified in section 4 of [\[SOAP1.1\]](#) or section 3 of [\[SOAP1.2-1/2007\]](#).

2.2 Messages

This section defines messages that are used by this protocol. The syntax of the definitions uses XML Schema as defined in [\[XMLSCHEMA1\]](#) and [\[XMLSCHEMA2\]](#) and Web Services Description Language (WSDL) as defined in [\[WSDL\]](#).

The following information describes the steps by which the API is mapped to structures and operations in the web service.

Each class in the ReportService2005 web service [\[MSDN-RSWS2005\]](#), except the one derived from **System.Web.Services.Protocols.SoapHttpClientProtocol** [\[MSDN-SoapHttpClientProtocol\]](#), becomes one WSDL type. The following rules apply:

- Non-inherited public properties become elements in the type, with the following exceptions and additional rules:
 - Any property named *AnyAttr* becomes the XSD **anyAttribute** in the type rather than an element.
 - If the name of a property is the concatenation of the name of another property in the same class and "Specified", no element is created for the former property in the type. The **minOccurs** attribute of the element for the latter property is 0. For other properties, the **minOccurs** attribute is 1 unless the API data type is **String**, **Byte[]**, or an array type, in which case the **minOccurs** attribute is 0.
 - The **maxOccurs** attribute of the element is 1 for nonarray types and "unbounded" for array types.
- If the class inherits another class in the web service, the WSDL type of the inherited class becomes an XSD extension in the WSDL type corresponding to the inheriting class.

Each enumeration in the web service becomes one WSDL type as an XSD enumeration.

Each class that inherits **System.Web.Services.Protocols.SoapHeader** [\[MSDN-SoapHeader\]](#) becomes one **SOAP header**.

Each method in the class derived from **System.Web.Services.Protocols.SoapHttpClientProtocol** [\[MSDN-SoapHttpClientProtocol\]](#) that is not derived from a base method in a base class or an interface becomes one **WSDL operation** with a corresponding SOAP operation, a request **WSDL message**, a response WSDL message, and corresponding WSDL types. The following rules apply:

- Out parameters and return values of the method become elements in the WSDL type for the response WSDL message.
- Other parameters of the method become elements in the WSDL type for the request WSDL message.

- If the method uses a SOAP header, the WSDL operation contains a WSDL message that has a single part of the WSDL type that corresponds to the SOAP header.

An array of a class becomes a WSDL type with an element of the WSDL type corresponding to the class.

The primitive data types that are used by the API are mapped to WSDL XML Schema types as described in the following table.

API primitive data type	WSDL XML Schema type
Byte[]	base64Binary
Boolean	boolean
SByte	byte
Double	double
DateTime	dateTime
Decimal	decimal
Single	float
Int32	int
Int64	long
XmlQualifiedName	QName
Int16	short
String	string
Byte	unsignedByte
UInt32	unsignedInt
UInt64	unsignedLong
UInt16	unsignedShort

The result of this mapping can be found in the full WSDL in [Appendix A](#) of this specification.

2.2.1 Namespaces

This specification specifies and references various **XML namespaces** by using the mechanisms specified in [XMLNS](#). Although this specification associates a specific XML namespace prefix for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

Prefix	Namespace URI	Reference
soap	http://schemas.xmlsoap.org/wsdl/soap/	[SOAP1.1]
tns	http://schemas.microsoft.com/sqlserver/2005/06/30/reporting/reportingservices	Defined in Appendix A of this document
s	http://www.w3.org/2001/XMLSchema	[XMLSCHEMA1]

Prefix	Namespace URI	Reference
soap12	http://schemas.xmlsoap.org/wsdl/soap12/	[SOAP1.2-1/2007]
wsdl	http://schemas.xmlsoap.org/wsdl	[WSDL]

2.2.2 Methods

The following table summarizes the set of method definitions that are defined by this specification.

Report Management for Native Mode: ReportService2005 methods are defined in detail in [\[MSDN-RS2005Methods\]](#).

Method	Description
CancelBatch	Cancels the batch that was initiated by a call to the CreateBatch method.
CancelJob	Cancels the execution of a job.
CreateBatch	Creates a batch that executes multiple methods within a single transaction.
CreateDataDrivenSubscription	Creates a data-driven subscription for a specified report.
CreateDataSource	Creates a new data source in the report server database.
CreateFolder	Adds a folder to the report server database.
CreateLinkedReport	Adds a new linked report to the report server database.
CreateModel	Creates a model in the catalog namespace.
CreateReport	Adds a new report to the report server database.
CreateReportHistorySnapshot	Generates a report history snapshot of a specified report.
CreateResource	Adds a new resource to the report server database.
CreateRole	Adds a new role to the report server database.
CreateSchedule	Creates a new shared schedule.
CreateSubscription	Creates a subscription for a specified report in the report server database.
DeleteItem	Deletes a specified item from the report server database.
DeleteReportHistorySnapshot	Deletes an individual report history snapshot for a specified report. If errors occur, the report history snapshot is not deleted.
DeleteRole	Deletes a specified role from the report server database.
DeleteSchedule	Deletes a shared schedule from the report server database.
DeleteSubscription	Deletes a subscription from the report server database.
DisableDataSource	Disables a data source that is enabled.
EnableDataSource	Enables a data source that is disabled.
ExecuteBatch	Executes all methods that are associated with a batch ID within a single

Method	Description
	database transaction.
FindItems	Returns items from a report server database that match the search criteria.
FireEvent	Triggers an event based on the supplied parameters.
FlushCache	Invalidates the cache for an individual report.
GenerateModel	Generates a default model on top of a shared data source.
GetCacheOptions	Returns the cache configuration for a report and the settings that describe when the cached copy of the report expires.
GetDataDrivenSubscriptionProperties	Returns the properties of a data-driven subscription.
GetDataSourceContents	Returns the contents of a data source.
GetExecutionOptions	Returns the execution option and associated settings for an individual report.
GetExtensionSettings	Returns a list of settings for a given extension.
GetItemDataSourcePrompts	Returns the data source prompts for a specified item.
GetItemDataSources	Returns the data sources for an item in the catalog.
GetItemType	Returns the type of an item in the report server database, if the item exists.
GetModelDefinition	Returns the definition for a model.
GetModelItemPermissions	Returns the user permissions that are associated with a model item.
GetModelItemPolicies	Returns the policies that are associated with a model item.
GetPermissions	Returns the user permissions that are associated with a particular item in the report server database.
GetPolicies	Returns the policies that are associated with a particular item in the report server database.
GetProperties	Returns the value of one or more properties of an item in the report server database.
GetRenderResource	Returns the resource for a specified rendering extension format.
GetReportDefinition	Returns the report definition for a report.
GetReportHistoryLimit	Returns the report history snapshot limit for a specified report.
GetReportHistoryOptions	Returns the report history snapshot option and properties that are generated for a report.
GetReportLink	Returns the name of the report whose report definition is used for the specified linked report.
GetReportParameters	Returns report parameter properties for a specified report. The GetReportParameters method can also be used to validate parameter values against parameters for a specified report.
GetResourceContents	Returns the contents of a resource.

Method	Description
GetRoleProperties	Returns role information and a collection of associated tasks.
GetScheduleProperties	Returns the properties of a shared schedule.
GetSubscriptionProperties	Returns the properties of a specified subscription.
GetSystemPermissions	Returns the system permissions of the current user.
GetSystemPolicies	Returns the system policies, including groups and associated roles.
GetSystemProperties	Returns the value of one or more system properties.
GetUserModel	Returns the semantic portion of a model for the current user.
InheritModelItemParentSecurity	Deletes the policies that are associated with a model item and causes the model item to inherit the policies from its parent.
InheritParentSecurity	Deletes the policies that are associated with an item. As a result, the item inherits the policies from its parent.
ListChildren	Returns a list of the children of a specified folder.
ListDependentItems	Returns a list of catalog items that reference a specified catalog item.
ListEvents	Returns a list of events that are supported by the report server.
ListExtensions	Returns a list of extensions that are configured for a given extension type.
ListJobs	Returns a list of jobs that are running on the report server.
ListModelDrillthroughReports	Returns a list of drillthrough reports that are associated with an entity in a model.
ListModelItemChildren	Returns an array of model item child elements.
ListModelPerspectives	Returns a list of models and perspectives that are available to the user.
ListReportHistory	Returns a list of report history snapshots and their properties for a specified report.
ListRoles	Returns the names and descriptions of the roles that the report server manages.
ListScheduledReports	Returns a list of reports that are associated with a shared schedule.
ListSchedules	Returns a list of all shared schedules.
ListSecureMethods	Returns a list of SOAP methods that require a secure connection when invoked.
ListSubscriptions	Returns a list of subscriptions that a user has created for a given report. The list includes both standard and data-driven subscriptions.
ListSubscriptionsUsingDataSource	Returns a list of subscriptions that are associated with a given data source.
ListTasks	Returns the names and descriptions of tasks that are managed by the report server.
Logoff	Logs out the current user who is making web service requests.
LogonUser	Logs on a user and authenticates a user request to the Report Server web service.

Method	Description
MoveItem	Moves or renames an item.
PauseSchedule	Pauses the execution of a given schedule.
PrepareQuery	Returns a dataset that contains the fields retrieved by the delivery query for a data-driven subscription.
RegenerateModel	Updates an existing model based on changes to the data source schema.
RemoveAllModelItemPolicies	Deletes all policies that are associated with model items in the specified model.
ResumeSchedule	Resumes a shared schedule that has been paused.
SetCacheOptions	Configures a report for caching and provides settings that specify when the cached copy of the report expires.
SetDataDrivenSubscriptionProperties	Sets the properties of a data-driven subscription.
SetDataSourceContents	Sets the contents of a data source.
SetExecutionOptions	Sets execution options and associated execution properties for a specified report.
SetItemDataSources	Sets the data sources for an item in the catalog.
SetModelDefinition	Sets the definition for a specified model.
SetModelDrillthroughReports	Associates a set of drillthrough reports with a model.
SetModelItemPolicies	Sets security policies on a model item.
SetPolicies	Sets the policies that are associated with a specified item.
SetProperties	Sets one or more properties of a specified item.
SetReportDefinition	Sets the report definition for a specified report.
SetReportHistoryLimit	Specifies the number of snapshots of a report that the report server retains in the report server database.
SetReportHistoryOptions	Sets report history options that specify when a report history snapshot is created for a specified report.
SetReportLink	Specifies the report that is used for the report definition of an existing linked report.
SetReportParameters	Sets report parameter properties for a specified report.
SetResourceContents	Sets the contents of a resource.
SetRoleProperties	Sets role properties and associates a collection of tasks with a specified role.
SetScheduleProperties	Sets the properties of a shared schedule.
SetSubscriptionProperties	Sets the properties of a subscription.
SetSystemPolicies	Sets the system policy that defines groups and associated roles.
SetSystemProperties	Sets one or more system properties.
UpdateReportExecutionSnapshot	Generates a report execution snapshot for a specified report.

Method	Description
ValidateExtensionSettings	Validates Reporting Services extension settings.

2.2.3 Types

The following table summarizes the set of type definitions that are defined by this specification.

Report Management for Native Mode: ReportService2005 types are defined in detail in [\[MSDN-RSWS2005\]](#).

Type	Description
ActiveState	Represents information about the active state of a subscription. An ActiveState object is returned by methods that query subscription properties.
BooleanOperatorEnum	Describes the logical operators that connect search conditions in a report server database search.
CatalogItem	Represents an item in the report server database.
ConditionEnum	Describes the type of comparison to perform between a SearchCondition object and the properties and values of items in the report server database.
CredentialRetrievalEnum	Describes the credential retrieval settings for a data source.
DailyRecurrence	Represents the intervals at which a scheduled report runs. Intervals are specified in days.
DataRetrievalPlan	Represents settings that are required to retrieve data from the delivery query for data-driven subscriptions.
DataSetDefinition	Represents information about a set of data to display in a report.
DataSource	Represents a data source in the report server database.
DataSourceCredentials	Represents data source credentials.
DataSourceDefinition	Represents a data source definition in the report server database.
DataSourceDefinitionOrReference	Represents a data source definition or a reference to a shared data source.
DataSourcePrompt	Represents the name of a data source and the prompt to display to a user.
DataSourceReference	Represents a reference to a shared data source.
DaysOfWeekSelector	Represents the days of the week on which a scheduled report runs.
DrillthroughType	Specifies the type of a drillthrough report.
Event	Represents an event that is registered with the report server.
ExecutionSettingEnum	Describes the current execution setting of a report.
ExpirationDefinition	Represents the expiration setting for a cached report.
Extension	Represents an extension that is registered with the report server.
ExtensionParameter	Represents a setting for an extension.

Type	Description
ExtensionSettings	Represents a delivery extension and its configurable settings.
ExtensionTypeEnum	Describes the type of extension that is registered with the report server.
Field	Represents a field within the dataset of a report.
InvalidDataSourceReference	Represents a state in which a data source reference is no longer valid.
ItemNamespaceEnum	Describes the namespace identifier that is used to retrieve property information for an item in the report server database.
ItemTypeEnum	Describes the type of an item in the report server database.
Job	Represents a user or system job that a report server is actively processing.
JobActionEnum	Describes the process that initiated a job.
JobStatusEnum	Describes the status of a job.
JobTypeEnum	Describes the type of a job.
MinuteRecurrence	Represents the intervals, in minutes, at which a scheduled report runs.
ModelCatalogItem	Provides a list of all model perspectives in a model in the report server namespace.
ModelDrillthroughReport	Provides information about a model drillthrough report.
ModelItem	Provides the semantic definition of a model item.
ModelItemTypeEnum	Defines the types that model items can contain.
ModelPerspective	Provides information about a perspective of a model.
MonthlyDOWRecurrence	Represents the dates on which a scheduled report runs—typically month, week, and day of the week.
MonthlyRecurrence	Represents the days of the month on which a scheduled report runs.
MonthsOfYearSelector	Represents the months of the year in which a scheduled report runs.
NoSchedule	Represents a state in which no schedules are associated with the execution or snapshot history settings of a report.
ParameterFieldReference	Represents a field name that a report server uses to retrieve the value for a parameter. The ParameterFieldReference class is used by data-driven subscriptions.
ParameterStateEnum	Specifies the state of a parameter.
ParameterTypeEnum	Specifies the data type of a parameter.
ParameterValue	Represents data that is used in parameterized reports or in delivery extension settings.
ParameterValueOrFieldReference	Represents a user-supplied value or a field name that represents the value of a parameter.
Policy	Represents groups and users and their roles, which are associated with items in the report server database.
Property	Represents the properties of an item in the report server database.

Type	Description
QueryDefinition	Represents a query that retrieves the data for a data-driven subscription.
RecurrencePattern	Represents the recurrence pattern of a schedule definition.
ReportHistorySnapshot	Represents a report history snapshot.
ReportParameter	Represents a report parameter.
Role	Represents a role for use in Reporting Services security.
Schedule	Represents a schedule and its properties.
ScheduleDefinition	Represents a defined schedule.
ScheduleDefinitionOrReference	Represents a schedule definition or a reference to a shared schedule.
ScheduleExpiration	Represents a schedule that defines when a cached copy of a report expires.
ScheduleReference	Represents a reference to a shared schedule.
ScheduleStateEnum	Describes the current state of a schedule.
SearchCondition	Represents the properties of an item for which to search in the report server database.
SecurityScopeEnum	Defines the scopes of security that are available on the report server.
SensitivityEnum	Describes the sensitivity of a given type: kanatype, case, or accent.
Subscription	Represents a subscription in the report server database.
Task	Represents Reporting Services tasks.
TimeExpiration	Represents the time, in minutes, that defines when a cached copy of a report expires.
ValidValue	Represents a valid value for an extension setting.
Warning	Represents a list of errors or warnings that is returned when a report is published or processed.
WeeklyRecurrence	Represents the number of weeks and the days of the week on which a scheduled report runs.
WeekNumberEnum	Describes the week of the month on which a scheduled report runs.

2.2.4 SOAP Headers

The following table summarizes the set of **SOAP header** definitions that are defined by this specification.

Report Management for Native Mode: ReportService2005 SOAP headers are defined in detail in [\[MSDN-RSWS2005\]](#).

SOAP header	Description
BatchHeader	Represents a batch header that supports the use of multi-method operations that run within a single transaction.

SOAP header	Description
ItemNamespaceHeader	Represents the identifier that is used to retrieve item properties.
ServerInfoHeader	Represents information about the report server .

3 Appendix A: Full WSDL

For ease of implementation, the full WSDL is provided here.

4 Appendix B: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include updates to those products.

- Microsoft SQL Server 2005
- Microsoft SQL Server 2008
- Microsoft SQL Server 2008 R2
- Microsoft SQL Server 2012
- Microsoft SQL Server 2014
- Microsoft SQL Server 2016

Exceptions, if any, are noted in this section. If an update version, service pack or Knowledge Base (KB) number appears with a product name, the behavior changed in that update. The new behavior also applies to subsequent updates unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms "SHOULD" or "SHOULD NOT" implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term "MAY" implies that the product does not follow the prescription.

[<1> Section 1.3](#): This protocol is not supported for backward compatibility in Microsoft SQL Server 2005 Reporting Services and Microsoft SQL Server 2008 Reporting Services.

[<2> Section 2.1](#): SQL Server 2005 Reporting Services and SQL Server 2008 Reporting Services do not fully support SOAP 1.2 [[SOAP1.2-1/2007](#)]. SQL Server 2008 R2 Reporting Services supports SOAP 1.1 binding [[SOAP1.1](#)] and SOAP 1.2 [[SOAP1.2-1/2007](#)].

5 Change Tracking

This section identifies changes that were made to this document since the last release. Changes are classified as Major, Minor, or None.

The revision class **Major** means that the technical content in the document was significantly revised. Major changes affect protocol interoperability or implementation. Examples of major changes are:

- A document revision that incorporates changes to interoperability requirements.
- A document revision that captures changes to protocol functionality.

The revision class **Minor** means that the meaning of the technical content was clarified. Minor changes do not affect protocol interoperability or implementation. Examples of minor changes are updates to clarify ambiguity at the sentence, paragraph, or table level.

The revision class **None** means that no new technical changes were introduced. Minor editorial and formatting changes may have been made, but the relevant technical content is identical to the last released version.

The changes made to this document are listed in the following table. For more information, please contact dochelp@microsoft.com.

Section	Description	Revision class
4 Appendix B: Product Behavior	Removed SQL Server 2017 and SQL Server 2019 from the list of applicable products.	Major
