

[MS-DACPAC]:

Data-Tier Application Schema File Format

Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation (“this documentation”) for protocols, file formats, data portability, computer languages, and standards support. Additionally, overview documents cover inter-protocol relationships and interactions.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you can make copies of it in order to develop implementations of the technologies that are described in this documentation and can distribute portions of it in your implementations that use these technologies or in your documentation as necessary to properly document the implementation. You can also distribute in your implementation, with or without modification, any schemas, IDLs, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications documentation.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that might cover your implementations of the technologies described in the Open Specifications documentation. Neither this notice nor Microsoft's delivery of this documentation grants any licenses under those patents or any other Microsoft patents. However, a given Open Specifications document might be covered by the Microsoft [Open Specifications Promise](#) or the [Microsoft Community Promise](#). If you would prefer a written license, or if the technologies described in this documentation are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.
- **License Programs.** To see all of the protocols in scope under a specific license program and the associated patents, visit the [Patent Map](#).
- **Trademarks.** The names of companies and products contained in this documentation might be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights. For a list of Microsoft trademarks, visit www.microsoft.com/trademarks.
- **Fictitious Names.** The example companies, organizations, products, domain names, email addresses, logos, people, places, and events that are depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

Reservation of Rights. All other rights are reserved, and this notice does not grant any rights other than as specifically described above, whether by implication, estoppel, or otherwise.

Tools. The Open Specifications documentation does not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments, you are free to take advantage of them. Certain Open Specifications documents are intended for use in conjunction with publicly available standards specifications and network programming art and, as such, assume that the reader either is familiar with the aforementioned material or has immediate access to it.

Support. For questions and support, please contact dochelp@microsoft.com.

Revision Summary

Date	Revision History	Revision Class	Comments
6/4/2010	0.1	Major	First release.
9/3/2010	0.1.1	Editorial	Changed language and formatting in the technical content.
2/9/2011	0.2	Minor	Clarified the meaning of the technical content.
7/7/2011	1.0	Major	Updated and revised the technical content.
11/3/2011	2.0	Major	Updated and revised the technical content.
1/19/2012	2.0	None	No changes to the meaning, language, or formatting of the technical content.
2/23/2012	2.0	None	No changes to the meaning, language, or formatting of the technical content.
3/27/2012	2.0	None	No changes to the meaning, language, or formatting of the technical content.
5/24/2012	2.0	None	No changes to the meaning, language, or formatting of the technical content.
6/29/2012	2.0	None	No changes to the meaning, language, or formatting of the technical content.
7/16/2012	2.0	None	No changes to the meaning, language, or formatting of the technical content.
10/8/2012	2.0	None	No changes to the meaning, language, or formatting of the technical content.
10/23/2012	2.0	None	No changes to the meaning, language, or formatting of the technical content.
3/26/2013	2.0	None	No changes to the meaning, language, or formatting of the technical content.
6/11/2013	2.0	None	No changes to the meaning, language, or formatting of the technical content.
8/8/2013	2.0	None	No changes to the meaning, language, or formatting of the technical content.
12/5/2013	2.0	None	No changes to the meaning, language, or formatting of the technical content.
2/11/2014	3.0	Major	Updated and revised the technical content.
5/20/2014	3.0	None	No changes to the meaning, language, or formatting of the technical content.
5/10/2016	3.0	None	No changes to the meaning, language, or formatting of the technical content.
8/16/2017	3.0	None	No changes to the meaning, language, or formatting of the technical content.

1 Introduction

The data-tier application (DAC) **schema** file format provides **XML schema** definitions for **XML** parts in a DAC package (a .dacpac file). A DAC is a self-contained unit for developing, deploying, and managing data-tier objects.

A DAC enables data-tier developers and database administrators (DBAs) to package Microsoft SQL Server objects, including **database objects** and instance objects, into a single entity called a DAC package, as specified in [\[MSDN-UNDERDAC\]](#). A DAC package consists of multiple XML parts that represent metadata of the DAC and SQL Server object schema.

Note that the XML Schema definition [\[XMLSCHEMA1\]](#) (**XSD**) in [Appendix A](#) of this document is supplemental to the data portability scenarios that are described in [\[MS-DPDACPAC\]](#).

Sections 1.7 and 2 of this specification are normative. All other sections and examples in this specification are informative.

1.1 Glossary

This document uses the following terms:

database object: A representation of a named set of attribute value pairs that a protocol exposes.

MIME type: A method that is used by protocol clients to associate files of a certain type with applications that can open or access files of that type.

schema: The set of attributes and object classes that govern the creation and update of objects.

XML: The Extensible Markup Language, as described in [\[XML1.0\]](#).

XML schema: A description of a type of XML document that is typically expressed in terms of constraints on the structure and content of documents of that type, in addition to the basic syntax constraints that are imposed by **XML** itself. An XML schema provides a view of a document type at a relatively high level of abstraction.

XML schema definition (XSD): The World Wide Web Consortium (W3C) standard language that is used in defining XML schemas. Schemas are useful for enforcing structure and constraining the types of data that can be used validly within other XML documents. XML schema definition refers to the fully specified and currently recommended standard for use in authoring **XML schemas**.

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as defined in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

Links to a document in the Microsoft Open Specifications library point to the correct section in the most recently published version of the referenced document. However, because individual documents in the library are not updated at the same time, the section numbers in the documents may not match. You can confirm the correct section numbering by checking the [Errata](#).

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information.

1.3 Overview

1.3.1 Data-Tier Application XML Parts

A data-tier application consists of the following two kinds of information to represent **database objects** and instance objects:

- **Logical object definition**
- **Physical object definition**

This information is specified in the **XML** format, as specified in [\[XML1.0\]](#), that complies with the **XSD** that is specified in this specification.

1.3.2 Document Structure

The root element of a data-tier application XML is an [Instances](#) element. Subelements of the **Instances** element can appear in any order. A collection can have multiple instances of a subelement.

1.3.2.1 XML Namespace

The namespace URIs for a data-tier application XML are:

<http://schemas.microsoft.com/sqlserver/RelationalEngine/Serialization/yyyy/mm>

<http://schemas.microsoft.com/sqlserver/ManagementModel/Serialization/yyyy/mm>

The date component (yyyy/mm) indicates the release date of particular version of data-tier application XML. The standard file name extension for XML parts in a data-tier application is *.xml. The **MIME type** to use for XML files in a data-tier application is text/xml.

1.4 Relationship to Protocols and Other Structures

The data-tier application schema definition in this document supplements the data-portability scenarios that are described in [\[MS-DPDACPAC\]](#).

1.5 Applicability Statement

This format is applicable for use as XML parts of a .dacpac file or for use as a user's reference.

1.6 Versioning and Localization

- The **XSD** version 2009/08 is released in Microsoft SQL Server 2008 R2.
- The XSD version 2010/11 is released in the Microsoft SQL Server 2008 R2 DAC out-of-band release.
- The XSD version 2011/03 is released in Microsoft SQL Server 2012.
- The XSD versions for **Management Model** and **Relational Engine** ([MSFT-REDACPAC200908] [MSFT-REDACPAC201011] [MSFT-REDACPAC201103]) are specified in [Appendix A](#).
- The data-tier application file format contains localization-independent structures.

1.7 Vendor-Extensible Fields

The XML **schema** definition and file structure of a .dacpac file is based on the design and implementation of SQL Server 2008 R2 Data-Tier Application Framework [\[MSDN-DACAPI\]](#). An extension of the XML schema in this document can result in unexpected behavior that is not supported by SQL Server 2008 R2, Microsoft SQL Server 2012, or Microsoft SQL Server 2014.

2 Structures

This section specifies the XML **schema** model, the [Management Model \(MM\)](#), and the [Relation Engine \(RE\) Model](#) of a data-tier application.

2.1 Management Model (MM)

Management Model (MM) is the logical structure definition of a data-tier application instance in XML. **MM** specifies instances of server and **database objects**. The logical structure and attributes of each server and database object is specified in the [Relational Engine \(RE\)](#) model. **Instance** elements in **MM** are designed to reference **RE** elements.

2.1.1 Instances

MM:Instances is the root element of a data-tier application. The **MM:Instances** element contains the subelements that are listed in the following table.

Subelements
CheckConstraint
Column
Database
DatabaseRole
DefaultConstraint
DmlTrigger
ForeignKeyColumn
ForeignKeyConstraint
IndexedColumn
Login
PrimaryKeyConstraint
RelationalIndex
ScalarParameter
ScalarValuedFunction
Schema
SpatialIndex <1>
Statistics <2>
StoredProcedure
Synonym <3>
Table
TableParameter

Subelements
TableValuedFunction
UniqueConstraint
User
UserDefinedDataType
UserDefinedTableType
View

The following is the XML definition of the **MM:Instances** element for version 2009/08.

```
<xs:element name="Instances"
  xmlns:MM="http://schemas.microsoft.com/sqlserver/ManagementModel/Serialization/2009/08"
  xmlns:RE="http://schemas.microsoft.com/sqlserver/RelationalEngine/Serialization/2009/08">
  <xs:complexType>
    <xs:choice minOccurs="0" maxOccurs="unbounded">
      <xs:element ref="RE:Database" maxOccurs="1" />

<xs:element ref="RE:SpatialIndex" />
<xs:element ref="RE:Statistics" />
<xs:element ref="RE:StoredProcedure" />
<xs:element ref="RE:Synonym" />
<xs:element ref="RE:Table" />
<xs:element ref="RE:TableParameter" />
<xs:element ref="RE:TableValuedFunction" />
<xs:element ref="RE:UniqueConstraint" />
<xs:element ref="RE:User" />
<xs:element ref="RE:UserDefinedDataType" />
<xs:element ref="RE:UserDefinedTableType" />
<xs:element ref="RE:View" />
</xs:choice>
<!--</xs:sequence>-->
</xs:complexType>
</xs:element>

```

2.1.2 Reference

The **MM:Reference** element specifies a referential relationship between two **RE** elements in a data-tier application.

The following is the XML **schema** definition of the **MM:Reference** element.

```

<xs:element name="Reference" type="MM:ReferenceType" />

```

2.1.3 Key

The **MM:Key** attribute specifies the unique identifier of a **RE** element instance in a data-tier application. All elements that are extended from [InstancesType](#) MUST contain an **MM:Key** attribute.

The following is the XML schema definition of the **MM:Key** attribute.

```

<xs:attribute name="Key" type="MM:KeyPatternType" />

```

2.1.4 ReferenceKey

The **MM:ReferenceKey** attribute specifies the unique identifier of the **RE** element instance that is referenced by another element in a data-tier application.

The following is the XML schema definition of the **MM:ReferenceKey** attribute.

```

<xs:attribute name="ReferenceKey" type="MM:KeyPatternType" />

```

2.1.5 KeyPatternType

The **MM:KeyPatternType** simple type specifies a regular expression for [MM:Key](#) and [MM:ReferenceKey](#) in a data-tier application.

The following is the XML definition of the **MM:KeyPatternType** simple type.

```
<xs:simpleType name="KeyPatternType">
  <xs:restriction base="xs:string">
    <xs:pattern value="(\/.*\[.*\])*" />
  </xs:restriction>
</xs:simpleType>
```

2.1.6 InstancesType

The **MM:InstancesType** is a complex type to set the mandatory attributes for all <Instance> elements in a data-tier application.

The following is the XML definition of the **MM:InstancesType** complex type.

```
<xs:complexType name="InstanceType" abstract="true">
  <xs:attribute ref="MM:Key" use="required"/>
</xs:complexType>
```

2.1.7 ReferenceType

The **MM:ReferenceType** is a complex type to set the mandatory attributes for all reference elements in a data-tier application.

The following is the XML definition of the **MM:ReferenceType** complex type.

```
<xs:complexType name="ReferenceType">
  <xs:attribute ref="MM:ReferenceKey" use="required" />
</xs:complexType>
```

2.1.8 ReferencesType

The **MM:ReferencesType** is a complex type that specifies a collection of multiple reference elements in a data-tier application.

The following is the XML definition of **MM:ReferenceType** complex type.

```
<xs:complexType name="ReferencesType">
  <xs:sequence>
    <xs:element minOccurs="1" maxOccurs="unbounded" ref="MM:Reference" />
  </xs:sequence>
</xs:complexType>
```

2.2 Relational Engine (RE)

The **Relational Engine (RE)** model specifies the **XML schema** of server and **database objects** and the metadata within a data-tier application.

The following subsections specify the objects supported by the data-tier application.

2.2.1 CheckConstraint

The **RE:CheckConstraint** element specifies the metadata of a check constraint in a data-tier application. For more information, see [\[MSDN-CHKCNST\]](#).

The following is the XML schema definition of the **RE:CheckConstraint** element for version 2009/08 [\[MSFT-REDACPAC200908\]](#).

```
<xs:element name="CheckConstraint">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="Text" type="xs:string" />
          <xs:element name="IsChecked" type="RE:BooleanType" />
          <xs:element name="IsEnabled" type="RE:BooleanType" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

The following is the XML schema definition of the **RE:CheckConstraint** element for version 2010/11 [\[MSFT-REDACPAC201011\]](#). This definition adds the **NotForReplication** option property.

```
<xs:element name="CheckConstraint">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="Text" type="xs:string" />
          <xs:element name="IsChecked" type="RE:BooleanType" />
          <xs:element name="IsEnabled" type="RE:BooleanType" />
          <xs:element name="NotForReplication" type="BooleanType" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

The following is the XML schema definition of the **RE:CheckConstraint** element version 2011/03 [\[MSFT-REDACPAC201103\]](#).

```
<xs:element name="CheckConstraint">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="Text" type="xs:string" />
          <xs:element name="IsChecked" type="RE:BooleanType" />
          <xs:element name="IsEnabled" type="RE:BooleanType" />
          <xs:element name="NotForReplication" type="RE:BooleanType" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

```

        </xs:extension>
      </xs:complexContent>
    </xs:complexType>
  </xs:element>

```

2.2.2 Column

The **RE:Column** element specifies the metadata of a table or view column in a data-tier application. For more information, see [\[MSDN-COLUMNPROPERTY\]](#) and [\[MSDN-CTTS\]](#).

The following is the XML schema definition of the **RE:Column** element.

```

<xs:element name="Column">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Name" type="xs:string" />
          <xs:element name="DataType" type="RE:DataType" />
          <xs:element name="Nullable" type="RE:BooleanType" />
          <xs:element name="IsColumnSet" type="RE:BooleanType" />
          <xs:element name="IsSparse" type="RE:BooleanType" />
          <xs:element name="RowGuidCol" type="RE:BooleanType" />
          <xs:element name="Collation" type="RE:CollationType" minOccurs="0" />
          <xs:element name="ComputedColumnInfo" type="RE:ComputedColumnType" minOccurs="0" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>

  <xs:element name="IdentityColumnInfo" type="RE:IdentityType" minOccurs="0"/>
  <xs:element name="DefaultValue" type="MM:ReferenceType" minOccurs="0"/>
</xs:all>
</xs:extension>
</xs:complexContent>
</xs:complexType>
</xs:element>

```

2.2.3 Database

The **RE:Database** element specifies the metadata of a database in a data-tier application. Note that **RE:Database** specifies a subset of attributes that are described in [\[MSDN-CDTS\]](#).

The following is the XML schema definition of the **RE:Database** element.

```

<xs:element name="Database">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Name" type="xs:string" />
          <xs:element name="Collation" type="RE:CollationType" />
          <xs:element name="CompatibilityLevel" type="RE:CompatibilityLevelEnumeration" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>

```

2.2.4 DatabaseRole

The **RE:DatabaseRole** element specifies the metadata of a database role in a data-tier application. For more information, see [\[MSDN-CRTS\]](#).

The following is the XML schema definition of the **RE:DatabaseRole** element for version 2009/08.

```
<xs:element name="DatabaseRole">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="Owner" type="MM:ReferenceType" minOccurs="0" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

The following is the XML schema definition of the **RE:DatabaseRole** element for version 2011/03.

```
<xs:element name="DatabaseRole">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="Owner" type="MM:ReferenceType" minOccurs="0" />
          <xs:element name="Permissions" type="RE:Permissions" minOccurs="0" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

2.2.5 DefaultConstraint

The **RE:DefaultConstraint** element specifies the metadata of a default constraint in a data-tier application. For more information, see [\[MSDN-CNSTS\]](#).

The following is the XML schema definition of the **RE:DefaultConstraint** element.

```
<xs:element name="DefaultConstraint">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Name" type="xs:string" />
          <xs:element name="Text" type="xs:string" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

2.2.6 DmlTrigger

The **RE:DmlTrigger** element specifies the metadata of a trigger that is associated with TABLE or VIEW DML statements in a data-tier application. For more information about trigger, see [\[MSDN-CTGTS\]](#).

The following is the XML schema definition of the **RE:DmlTrigger** element for version 2009/08.

```
<xs:element name="DmlTrigger">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="BodyText" type="xs:string" />
          <xs:element name="InsteadOf" type="RE:BooleanType" />
          <xs:element name="IsEncrypted" type="RE:BooleanType" />
          <xs:element name="IsQuotedIdentifierOn" type="RE:BooleanType" />
          <xs:element name="NotForReplication" type="RE:BooleanType" />
          <xs:element name="Delete" type="RE:BooleanType" />
          <xs:element name="Insert" type="RE:BooleanType" />
          <xs:element name="Update" type="RE:BooleanType" />
          <xs:element name="ExecutionContext" type="RE:ExecutionContextType" minOccurs="0" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

The following is the XML schema definition of the **RE:DmlTrigger** element for version 2011/03.

```
<xs:element name="DmlTrigger">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <!-- reference to On {table | view} -->
          <xs:element name="Name" type="xs:string" />
          <xs:element name="BodyText" type="xs:string" />
          <xs:element name="InsteadOf" type="RE:BooleanType" />
          <xs:element name="IsEnabled" type="RE:BooleanType" />
          <xs:element name="IsEncrypted" type="RE:BooleanType" />
          <xs:element name="IsQuotedIdentifierOn" type="RE:BooleanType" />
          <xs:element name="NotForReplication" type="RE:BooleanType" />
          <xs:element name="Delete" type="RE:BooleanType" />
          <xs:element name="DeleteActivationOrder" type="RE:ActivationOrder" />
          <xs:element name="Insert" type="RE:BooleanType" />
          <xs:element name="InsertActivationOrder" type="RE:ActivationOrder" />
          <xs:element name="Update" type="RE:BooleanType" />
          <xs:element name="UpdateActivationOrder" type="RE:ActivationOrder" />
          <xs:element name="ExecutionContext" type="RE:ExecutionContextType" minOccurs="0" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

2.2.7 ForeignKeyColumn

The **RE:ForeignKeyColumn** element specifies the metadata of a column that is referenced by a foreign key in a data-tier application. For more information, see [\[MSDN-CNSTS\]](#).

The following is the XML schema definition of the **RE:ForeignKeyColumn** element.

```
<xs:element name="ForeignKeyColumn">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="ReferencedColumn" type="MM:ReferenceType" />
          <xs:element name="ReferencingColumn" type="MM:ReferenceType" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

2.2.8 ForeignKeyConstraint

The **RE:ForeignKeyConstraint** element specifies the metadata of a foreign key in a data-tier application. For more information, see [\[MSDN-CNSTS\]](#).

The following is the XML schema definition of the **RE:ForeignKeyConstraint** element.

```
<xs:element name="ForeignKeyConstraint">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="Columns" type="MM:ReferencesType" />
          <xs:element name="ReferencedTable" type="MM:ReferenceType" />
          <xs:element name="IsChecked" type="RE:BooleanType" />
          <xs:element name="IsEnabled" type="RE:BooleanType" />
          <xs:element name="NotForReplication" type="RE:BooleanType" />
          <xs:element name="DeleteAction" type="RE:DMLActionEnumeration" />
          <xs:element name="UpdateAction" type="RE:DMLActionEnumeration" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

2.2.9 IndexedColumn

The **RE:IndexedColumn** element specifies the metadata of an indexed column in a data-tier application. For more information, see [\[MSDN-CITS\]](#).

The following is the XML definition of the **RE:IndexedColumn** element.

```
<xs:element name="IndexedColumn">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
```

```

        <xs:all>
          <xs:element name="ReferencedColumn" type="MM:ReferenceType" />
          <xs:element name="SortOrder" type="RE:SortOrderEnumeration" />
          <xs:element name="IsIncluded" type="xs:string" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>

```

2.2.10 Login

The **RE:Login** element specifies the metadata of a login in a data-tier application. For more information, see [\[MSDN-CLTS\]](#). Note that **RE:Login** in data-tier application supports a subset of attributes that are described in [\[MSDN-CLTS\]](#).

The following is the XML schema representation of the **RE:Login** element.

```

<xs:element name="Login">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Name" type="xs:string" />
          <xs:element name="LoginType" type="RE:LoginTypeEnumeration" />
          <xs:element name="Language" type="xs:string" minOccurs="0"/>
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>

```

2.2.11 PrimaryKeyConstraint

The **RE:PrimaryKeyConstraint** element specifies the metadata of a primary key in a data-tier application. For more information, see [\[MSDN-CNSTS\]](#).

The following is the XML schema representation of the **RE:PrimaryKeyConstraint** element.

```

<xs:element name="PrimaryKeyConstraint">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="AssociatedIndex" type="MM:ReferenceType" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>

```

2.2.12 RelationalIndex

Applies to DACPAC version 2009/08 [\[MSFT-REDACPAC200908\]](#) **and DACPAC version 2011/03** [\[MSFT-REDACPAC201103\]](#)

The **RE:RelationalIndex** element specifies the metadata of an index in a data-tier application. For more information, see [\[MSDN-CITS\]](#).

The following is the XML schema definition of the **RE:RelationalIndex** element for version 2009/08 [MSFT-REDACPAC200908].

```
<xs:element name="RelationalIndex">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="IndexedColumns" type="MM:ReferencesType" />
          <xs:element name="CompactLargeObjects" type="RE:BooleanType" />
          <xs:element name="DisallowPageLocks" type="RE:BooleanType" />
          <xs:element name="DisallowRowLocks" type="RE:BooleanType" />
          <xs:element name="FillFactor" type="RE:FillFactorType" />
          <xs:element name="FilterDefinition" type="xs:string" />
          <xs:element name="IgnoreDuplicateKeys" type="RE:BooleanType" />
          <xs:element name="IndexKey" type="MM:ReferenceType" minOccurs="0" />
          <xs:element name="IsClustered" type="RE:BooleanType" />
          <xs:element name="IsDisabled" type="RE:BooleanType" />
          <xs:element name="IsUnique" type="RE:BooleanType" />
          <xs:element name="MaximumDegreeOfParallelism" type="xs:short" />
          <xs:element name="NoAutomaticRecomputation" type="RE:BooleanType" />
          <xs:element name="OnlineIndexOperation" type="RE:BooleanType" />
          <xs:element name="PadIndex" type="RE:BooleanType" />
          <xs:element name="SortInTempdb" type="RE:BooleanType" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

The following is the XML schema definition of the **RE:RelationalIndex** element for version 2011/03 [MSFT-REDACPAC201103].

```
<xs:element name="RelationalIndex">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="IndexedColumns" type="MM:ReferencesType" />
          <xs:element name="CompactLargeObjects" type="RE:BooleanType" />
          <xs:element name="DisallowPageLocks" type="RE:BooleanType" />
          <xs:element name="DisallowRowLocks" type="RE:BooleanType" />
          <xs:element name="FillFactor" type="RE:FillFactorType" />
          <xs:element name="FilterDefinition" type="xs:string" />
          <xs:element name="IgnoreDuplicateKeys" type="RE:BooleanType" />
          <xs:element name="IndexKey" type="MM:ReferenceType" minOccurs="0" />
          <xs:element name="IsClustered" type="RE:BooleanType" />
          <xs:element name="IsDisabled" type="RE:BooleanType" />
          <xs:element name="IsUnique" type="RE:BooleanType" />
          <xs:element name="NoAutomaticRecomputation" type="RE:BooleanType" />
          <xs:element name="PadIndex" type="RE:BooleanType" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

2.2.13 ScalarParameter

The **RE:ScalarParameter** element specifies the metadata of a function or stored procedure parameter with scalar values in a data-tier application. For more information, refer to parameters in [\[MSDN-CFTS\]](#) or [\[MSDN-CPRTS\]](#).

The following is the XML schema definition of the **RE:ScalarParameter**.

```
<xs:element name="ScalarParameter">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Name" type="xs:string" />
          <xs:element name="DataType" type="RE:DataType" />
          <xs:element name="IsOutput" type="RE:BooleanType" />
          <xs:element name="Nullable" type="RE:BooleanType" />
          <xs:element name="DefaultValue" type="xs:string" minOccurs="0" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

2.2.14 ScalarValuedFunction

The **RE:ScalarValuedFunction** element specifies the metadata of a function that returns a scalar value in a data-tier application. For more information on function, see [\[MSDN-CFTS\]](#).

The following is the XML schema definition of the **RE:ScalarValuedFunction** element.

```
<xs:element name="ScalarValuedFunction">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="BodyText" type="xs:string" />
          <xs:element name="DataType" type="RE:DataType" />
          <xs:element name="Parameters" type="MM:ReferencesType" minOccurs="0" />
          <xs:element name="ExecutionContext" type="RE:ExecutionContextType" minOccurs="0" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

2.2.15 Schema

The **RE:Schema** element specifies the metadata of the database schema in a data-tier application. For more information, see [\[MSDN-CSTS\]](#).

The following is the XML schema definition of the **RE:Schema** element.

```
<xs:element name="Schema">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="Owner" type="MM:ReferenceType" minOccurs="0" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

2.2.16 SpatialIndex

Applies to DACPAC version 2011/03 [\[MSFT-REDACPAC201103\]](#)

The **RE:SpatialIndex** element specifies the metadata of a stored procedure in a data-tier application. [<4>](#) For more information, see [\[MSDN-CPRTS\]](#).

The following is the XML schema definition of the **RE:SpatialIndex** element.

```
<xs:element name="SpatialIndex">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="BoundingBoxXMax" type="xs:unsignedInt" />
          <xs:element name="BoundingBoxXMin" type="xs:unsignedInt" />
          <xs:element name="BoundingBoxYMax" type="xs:unsignedInt" />
          <xs:element name="BoundingBoxYMin" type="xs:unsignedInt" />
          <xs:element name="CellsPerObject" type="xs:unsignedInt" />
          <xs:element name="DisallowPageLocks" type="RE:BooleanType" />
          <xs:element name="DisallowRowLocks" type="RE:BooleanType" />
          <xs:element name="FillFactor" type="RE:FillFactorType" />
          <xs:element name="IgnoreDuplicateKeys" type="RE:BooleanType" />
          <xs:element name="IndexedColumn" type="MM:ReferenceType" />
          <xs:element name="IsDisabled" type="RE:BooleanType" />
          <xs:element name="PadIndex" type="RE:BooleanType" />
          <xs:element name="NoAutomaticRecomputation" type="RE:BooleanType" />
          <xs:element name="Level1Density" type="RE:GridDensity" />
          <xs:element name="Level2Density" type="RE:GridDensity" />
          <xs:element name="Level3Density" type="RE:GridDensity" />
          <xs:element name="Level4Density" type="RE:GridDensity" />
          <xs:element name="Name" type="xs:string" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

2.2.17 Statistics

Applies to DACPAC version 2011/03 [\[MSFT-REDACPAC201103\]](#)

The **RE:Statistics** element specifies the metadata of stored procedure in a data-tier application [<5>](#). For more information, see [\[MSDN-CPRTS\]](#).

The following is the XML schema definition of the **RE:Statistics** element.

```
<xs:element name="Statistics">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Columns" type="MM:ReferencesType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="FilterDefinition" type="xs:string" minOccurs="0" />
          <xs:element name="NoAutomaticRecomputation" type="RE:BooleanType" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

2.2.18 StoredProcedure

The **RE:StoredProcedure** element specifies the metadata of stored procedure in a data-tier application. For more information, see [\[MSDN-CPRTS\]](#).

The following is the XML schema definition of the **RE:StoredProcedure** element.

```
<xs:element name="StoredProcedure">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="BodyText" type="xs:string" />
          <xs:element name="Parameters" type="MM:ReferencesType" minOccurs="0" />
          <xs:element name="ExecutionContext" type="RE:ExecutionContextType" minOccurs="0" />
          <xs:element name="ForReplication" type="RE:BooleanType" />
          <xs:element name="IsEncrypted" type="RE:BooleanType" />
          <xs:element name="IsQuotedIdentifierOn" type="RE:BooleanType" />
          <xs:element name="IsRecompiled" type="RE:BooleanType" />
          <xs:element name="IsSqlClr" type="RE:BooleanType" />
          <xs:element name="Startup" type="RE:BooleanType" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>
```

2.2.19 Synonym

Applies to DACPAC version 2011/03 [\[MSFT-REDACPAC201103\]](#)

The **RE:Synonym** element specifies the metadata of a stored procedure in a data-tier application. [<6>](#) For more information, see [\[MSDN-CPRTS\]](#).

The following is the XML schema definition of the **RE:Synonym** element.

```
<xs:element name="Synonym">
  <xs:complexType>
    <xs:complexContent>
```

```

<xs:extension base="MM:InstanceType">
  <xs:all>
    <xs:element name="Parent" type="MM:ReferenceType" />
    <xs:element name="BaseObjectName" type="xs:string" />
    <xs:element name="Name" type="xs:string" />
  </xs:all>
</xs:extension>
</xs:complexContent>
</xs:complexType>
</xs:element>

```

2.2.20 Table

The **RE:Table** element specifies the metadata of a table in a data-tier application. For more information, see [\[MS-CTIS\]](#).

The following is the XML schema definition of the **RE:Table** element.

```

<xs:element name="Table">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="Columns" type="MM:ReferencesType" />
          <xs:element name="IsQuotedIdentifierOn" type="RE:BooleanType" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>

```

2.2.21 TableParameter

The **RE:TableParameter** element specifies the metadata of a parameter with a table value type in a data-tier application. For more information, see [\[MSDN-TVPDE\]](#).

The following is the XML schema definition of the **RE:TableParameter** element.

```

<xs:element name="TableParameter">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Name" type="xs:string" />
          <xs:element name="DataType" type="RE:DataType" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>

```

2.2.22 TableValuedFunction

The **RE:TableValueFunction** element specifies the metadata of a function that returns a table value in a data-tier application. For more information, see [\[MSDN-TVUDF\]](#).

The following is the XML schema definition of the **RE:TableValueFunction** element.

```
<xs:element name="TableValuedFunction">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="BodyText" type="xs:string" />
          <xs:element name="Columns" type="MM:ReferencesType" />
          <xs:element name="Parameters" type="MM:ReferencesType" minOccurs="0" />
          <xs:element name="ExecutionContext" type="RE:ExecutionContextType" minOccurs="0" />
        />
        <xs:element name="IsEncrypted" type="RE:BooleanType" />
        <xs:element name="IsInline" type="RE:BooleanType" />
        <xs:element name="IsQuotedIdentifierOn" type="RE:BooleanType" />
        <xs:element name="IsSchemaBound" type="RE:BooleanType" />
        <xs:element name="IsSqlClr" type="RE:BooleanType" />
        <xs:element name="TableVariableName" type="xs:string" minOccurs="0" />
      />
    />
  />
</xs:element>
```

2.2.23 UniqueConstraint

The **RE:UniqueConstraint** element specifies the metadata of a unique constraint in a data-tier application. For more information, see [\[MSDN-CNSTS\]](#).

The following is the XML schema definition of the **RE:UniqueConstraint** element.

```
<xs:element name="UniqueConstraint">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="AssociatedIndex" type="MM:ReferenceType" />
        />
      />
    />
  />
</xs:element>
```

2.2.24 User

The **RE:User** element specifies the metadata of database user in a data-tier application. For more information, see [\[MSDN-CUTS\]](#).

The following is the XML schema definition of the **RE:User** element for version 2009/08.

```
<xs:element name="User">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
```

```

        <xs:element name="Parent" type="MM:ReferenceType" />
        <xs:element name="Name" type="xs:string" />
        <xs:element name="UserType" type="RE:UserTypeEnumeration" />
        <xs:element name="Login" type="MM:ReferenceType" minOccurs="0" />
        <xs:element name="DefaultSchema" type="MM:ReferenceType" minOccurs="0" />
    </xs:all>
</xs:extension>
</xs:complexContent>
</xs:complexType>
</xs:element>
<xs:element name="User">
    <xs:complexType>
        <xs:complexContent>
            <xs:extension base="MM:InstanceType">
                <xs:all>
                    <xs:element name="Parent" type="MM:ReferenceType" />
                    <xs:element name="Name" type="xs:string" />
                    <xs:element name="UserType" type="RE:UserTypeEnumeration" />
                    <xs:element name="Login" type="MM:ReferenceType" minOccurs="0" />
                    <xs:element name="MemberOfRoles" type="MM:ReferenceType" minOccurs="0" />
                    <xs:element name="DefaultSchema" type="MM:ReferenceType" minOccurs="0" />
                </xs:all>
            </xs:extension>
        </xs:complexContent>
    </xs:complexType>
</xs:element>

```

2.2.25 UserDefinedDataType

The **RE:UserDefinedDataType** element specifies the metadata of a user-defined data type in a data-tier application. For more information, see [\[MSDN-DTTS\]](#) and [\[MSDN-CTYTS\]](#).

The following is the XML schema definition of the **RE:UserDefinedDataType** element.

```

<xs:element name="UserDefinedDataType">
    <xs:complexType>
        <xs:complexContent>
            <xs:extension base="MM:InstanceType">
                <xs:all>
                    <xs:element name="Parent" type="MM:ReferenceType" />
                    <xs:element name="Name" type="xs:string" />
                    <xs:element name="BaseSystemDataType" type="RE:BaseSystemDataType" />
                    <xs:element minOccurs="0" name="Nullable" type="RE:BooleanType" />
                </xs:all>
            </xs:extension>
        </xs:complexContent>
    </xs:complexType>
</xs:element>

```

2.2.26 UserDefinedTableType

The **RE:UserDefinedTableType** element specifies the metadata of a user-defined table type in a data-tier application. For more information, see [\[MSDN-UDTT\]](#) and [\[MSDN-CTYTS\]](#).

The following is the XML schema definition of the **RE:UserDefinedTableType** element.

```

<xs:element name="UserDefinedTableType">
    <xs:complexType>
        <xs:complexContent>

```

```

<xs:extension base="MM:InstanceType">
  <xs:all>
    <xs:element name="Parent" type="MM:ReferenceType" />
    <xs:element name="Name" type="xs:string" />
    <xs:element name="Columns" type="MM:ReferencesType" />
  </xs:all>
</xs:extension>
</xs:complexContent>
</xs:complexType>
</xs:element>

```

2.2.27 View

The **RE:View** element specifies the metadata of a view in a data-tier application. For more information, see [\[MSDN-CVTS\]](#).

The following is the XML schema definition of the **RE:View** element.

```

<xs:element name="View">
  <xs:complexType>
    <xs:complexContent>
      <xs:extension base="MM:InstanceType">
        <xs:all>
          <xs:element name="Parent" type="MM:ReferenceType" />
          <xs:element name="Name" type="xs:string" />
          <xs:element name="QueryText" type="xs:string" />
          <xs:element name="Columns" type="MM:ReferencesType" />
          <xs:element name="HasCheckOption" type="RE:BooleanType" />
          <xs:element name="HasColumnSpecification" type="RE:BooleanType" />
          <xs:element name="IsEncrypted" type="RE:BooleanType" />
          <xs:element name="IsQuotedIdentifierOn" type="RE:BooleanType" />
          <xs:element name="IsSchemaBound" type="RE:BooleanType" />
          <xs:element name="ReturnsViewMetadata" type="RE:BooleanType" />
        </xs:all>
      </xs:extension>
    </xs:complexContent>
  </xs:complexType>
</xs:element>

```

2.2.28 ActivationOrder

Applies to DACPAC version 2011/03 [\[MSFT-REDACPAC201103\]](#)

RE:ActivationOrder is a simple type for a Boolean type in a data-tier application.

The following is the XML schema definition of the **RE:ActivationOrder** simple type.

```

<xs:simpleType name="ActivationOrder">
  <xs:restriction base="xs:string">
    <xs:enumeration value="None" />
    <xs:enumeration value="First" />
    <xs:enumeration value="Last" />
  </xs:restriction>
</xs:simpleType>

```

2.2.29 BooleanType

RE:BooleanType is a simple type for a Boolean type in a data-tier application.

The following is the XML schema definition of the **RE:BooleanType** simple type.

```
<xs:simpleType name="BooleanType">
  <xs:restriction base="xs:string">
    <xs:enumeration value="True" />
    <xs:enumeration value="False" />
  </xs:restriction>
</xs:simpleType>
```

2.2.30 CompatibilityLevelEnumeration

RE:CompatibilityLevelEnumeration is a simple type that enumerates the database compatibility values in a data-tier application.

The following is the XML schema definition of **RE:CompatibilityLevelEnumeration** for version 2009/08.

```
<xs:simpleType name="CompatibilityLevelEnumeration">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Version80" />
    <xs:enumeration value="Version90" />
    <xs:enumeration value="Version100" />
    <xs:enumeration value="Current" />
  </xs:restriction>
</xs:simpleType>
<xs:simpleType name="CompatibilityLevelEnumeration">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Version80" />
    <xs:enumeration value="Version90" />
    <xs:enumeration value="Version100" />
    <xs:enumeration value="Version110" />
    <xs:enumeration value="Current" />
  </xs:restriction>
</xs:simpleType>
```

2.2.31 DMLActionEnumeration

RE:DMLActionEnumeration is a simple type that enumerates data manipulation language (DML) actions in a data-tier application.

The following is the XML schema definition of the **RE:DMLActionEnumeration** simple type.

```
<xs:simpleType name="DMLActionEnumeration">
  <xs:restriction base="xs:string">
    <xs:enumeration value="NoAction" />
    <xs:enumeration value="Cascade" />
    <xs:enumeration value="SetNull" />
    <xs:enumeration value="SetDefault" />
  </xs:restriction>
</xs:simpleType>
```

2.2.32 ExecuteAsEnumeration

RE:ExecuteAsEnumeration is a simple type that enumerates "EXECUTE AS" clause values in a data-tier application. For more information, see [\[MSDN-EATS\]](#).

The following is the XML schema definition of the **RE:ExecuteAsEnumeration** simple type for version 2009/08.

```
<xs:simpleType name="ExecuteAsEnumeration">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Caller" />
    <xs:enumeration value="Self" />
    <xs:enumeration value="Owner" />
    <xs:enumeration value="ExecuteAsUser" />
  </xs:restriction>
</xs:simpleType>
```

The following is the XML schema definition of the **RE:ExecuteAsEnumeration** simple type for version 2011/03.

```
<xs:simpleType name="ExecuteAsEnumeration">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Caller" />
    <xs:enumeration value="Self" />
    <xs:enumeration value="Owner" />
    <xs:enumeration value="ExecuteAsUser" />
    <xs:enumeration value="ExecuteAsLogin" />
  </xs:restriction>
</xs:simpleType>
```

2.2.33 GridDensity

Applies to DACPAC version 2011/03 [\[MSFT-REDACPAC201103\]](#)

RE:GridDensity is a simple type that enumerates type of logins in a data-tier application. [<7>](#) For more information, see [\[MSDN-CLTS\]](#).

The following is the XML schema definition of the **RE:GridDensity** simple type.

```
<xs:simpleType name="GridDensity">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Low" />
    <xs:enumeration value="Medium" />
    <xs:enumeration value="High" />
  </xs:restriction>
</xs:simpleType>
```

2.2.34 LoginTypeEnumeration

RE:LoginTypeEnumeration is a simple type that enumerates type of logins in a data-tier application. For more information, see [\[MSDN-CLTS\]](#).

The following is the XML schema definition of the **RE:LoginTypeEnumeration** simple type.

```
<xs:simpleType name="LoginTypeEnumeration">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Sql" />
    <xs:enumeration value="Windows" />
  </xs:restriction>
```

```
</xs:simpleType>
```

2.2.35 PermissionStateEnum

Applies to DACPAC version 2011/03 [\[MSFT-REDACPAC201103\]](#)

RE:PermissionStateEnum is a simple type that enumerates type of logins in a data-tier application. For more information, see [\[MSDN-CLTS\]](#).

The following is the XML schema definition of the **RE:PermissionStateEnum** simple type.

```
<xs:simpleType name="PermissionStateEnum">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Deny" />
    <xs:enumeration value="Grant" />
    <xs:enumeration value="GrantWithGrant" />
    <xs:enumeration value="Revoke" />
  </xs:restriction>
</xs:simpleType>
```

2.2.36 PermissionTypeEnum

Applies to DACPAC version 2011/03 [\[MSFT-REDACPAC201103\]](#)

RE:PermissionTypeEnum is a simple type that enumerates type of logins in a data-tier application. For more information, see [\[MSDN-CLTS\]](#).

The following is the XML schema definition of the **RE:PermissionTypeEnum** simple type.

```
<xs:simpleType name="PermissionTypeEnum">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Alter" />
    <xs:enumeration value="AlterAnyApplicationRole" />
    <xs:enumeration value="AlterAnyAssembly" />
    <xs:enumeration value="AlterAnyAsymmetricKey" />
    <xs:enumeration value="AlterAnyCertificate" />
    <xs:enumeration value="AlterAnyContract" />
    <xs:enumeration value="AlterAnyDatabaseAudit" />
    <xs:enumeration value="AlterAnyDatabaseDdlTrigger" />
    <xs:enumeration value="AlterAnyDatabaseEventNotification" />
    <xs:enumeration value="AlterAnyDataspace" />
    <xs:enumeration value="AlterAnyFulltextCatalog" />
    <xs:enumeration value="AlterAnyMessageType" />
    <xs:enumeration value="AlterAnyRemoteServiceBinding" />
    <xs:enumeration value="AlterAnyRole" />
    <xs:enumeration value="AlterAnyRoute" />
    <xs:enumeration value="AlterAnySchema" />
    <xs:enumeration value="AlterAnyService" />
    <xs:enumeration value="AlterAnySymmetricKey" />
    <xs:enumeration value="AlterAnyUser" />
    <xs:enumeration value="Authenticate" />
    <xs:enumeration value="BackupDatabase" />
    <xs:enumeration value="BackupLog" />
    <xs:enumeration value="Checkpoint" />
    <xs:enumeration value="Connect" />
    <xs:enumeration value="ConnectReplication" />
    <xs:enumeration value="Control" />
    <xs:enumeration value="CreateAggregate" />
    <xs:enumeration value="CreateAssembly" />
    <xs:enumeration value="CreateAsymmetricKey" />
    <xs:enumeration value="CreateCertificate" />
  </xs:restriction>
</xs:simpleType>
```

```

<xs:enumeration value="CreateContract" />
<xs:enumeration value="CreateDatabase" />
<xs:enumeration value="CreateDatabaseDdlEventNotification" />
<xs:enumeration value="CreateDefault" />
<xs:enumeration value="CreateFulltextCatalog" />
<xs:enumeration value="CreateFunction" />
<xs:enumeration value="CreateMessageType" />
<xs:enumeration value="CreateProcedure" />
<xs:enumeration value="CreateQueue" />
<xs:enumeration value="CreateRemoteServiceBinding" />
<xs:enumeration value="CreateRole" />
<xs:enumeration value="CreateRoute" />
<xs:enumeration value="CreateRule" />
<xs:enumeration value="CreateSchema" />
<xs:enumeration value="CreateService" />
<xs:enumeration value="CreateSymmetricKey" />
<xs:enumeration value="CreateSynonym" />
<xs:enumeration value="CreateTable" />
<xs:enumeration value="CreateType" />
<xs:enumeration value="CreateView" />
<xs:enumeration value="CreateXmlSchemaCollection" />
<xs:enumeration value="Delete" />
<xs:enumeration value="Execute" />
<xs:enumeration value="Impersonate" />
<xs:enumeration value="Insert" />
<xs:enumeration value="Receive" />
<xs:enumeration value="References" />
<xs:enumeration value="Select" />
<xs:enumeration value="Send" />
<xs:enumeration value="Showplan" />
<xs:enumeration value="SubscribeQueryNotifications" />
<xs:enumeration value="TakeOwnership" />
<xs:enumeration value="Update" />
<xs:enumeration value="ViewChangeTracking" />
<xs:enumeration value="ViewDatabaseState" />
<xs:enumeration value="ViewDefinition" />
</xs:restriction>
</xs:simpleType>

```

2.2.37 SortOrderEnumeration

RE:SortOrderEnumeration is a simple type that enumerates sort-order values in a data-tier application.

The following is the XML schema definition of the **RE:SortOrderEnumeration** simple type.

```

<xs:simpleType name="SortOrderEnumeration">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Ascending" />
    <xs:enumeration value="Descending" />
  </xs:restriction>
</xs:simpleType>

```

2.2.38 UserTypeEnumeration

Applies to DACPAC version 2009/08 [\[MSFT-REDACPAC200908\]](#) **and DACPAC version 2011/03** [\[MSFT-REDACPAC201103\]](#)

RE:UserTypeEnumeration is a simple type that enumerates the types of database users in a data-tier application.

The following is the XML schema definition of **RE:UserTypeEnumeration** simple type for version 2009/08.

```
<xs:simpleType name="UserTypeEnumeration">
  <xs:restriction base="xs:string">
    <xs:enumeration value="NoLogin" />
    <xs:enumeration value="SqlLogin" />
  </xs:restriction>
</xs:simpleType>
```

2.2.39 FillFactorType

RE:FillFactorType is a simple type that sets the value range of fill factor in a data-tier application.

The following is the XML schema definition of the **RE:FillFactorType** simple type.

```
<!-- default 0-->
<xs:simpleType name="FillFactorType">
  <xs:restriction base="xs:short">
    <xs:minInclusive value="0"/>
    <xs:maxInclusive value="100"/>
  </xs:restriction>
</xs:simpleType>
```

2.2.40 MaxDopType

Applies to DACPAC version 2009/08 only [\[MSFT-REDACPAC200908\]](#)

RE:MaxDopType is a simple type that sets the value range of the maximum degree of parallelism in a data-tier application. [<8>](#) Note that -1 is used if the maxdop value is not set.

The following is the XML schema definition of the **RE:MaxDopType** simple type.

```
<xs:simpleType name="MaxDopType">
  <xs:restriction base="xs:short">
    <xs:minInclusive value="-1"/>
    <xs:maxInclusive value="64"/>
  </xs:restriction>
</xs:simpleType>
```

2.2.41 BaseSystemDataType

RE:BaseSystemDataType is a complex type for the system data type that is described in [\[MSDN-DTTS\]](#).

The following is the XML schema definition of the **RE:BaseSystemDataType** complex type.

```
<xs:complexType name="BaseSystemDataType">
  <xs:all>
    <xs:element name="SystemDataType" type="RE:SqlDataType" />
  </xs:all>
</xs:complexType>
```

2.2.42 CollationType

RE:CollationType is a complex type definition that specifies the collation value in a data-tier application.

The following is the XML schema definition of the **RE:CollationType** complex type.

```
<xs:complexType name="CollationType">
  <xs:all>
    <xs:element name="Name" type="RE:CollationEnumeration" />
  </xs:all>
</xs:complexType>
```

2.2.43 ComputedColumnType

RE:ComputedColumnType is a complex type that specifies a computed column in a data-tier application.

The following is the XML schema definition of the **RE:ComputedColumnType** complex type.

```
<xs:complexType name="ComputedColumnType">
  <xs:all>
    <xs:element name="Text" type="xs:string" />
    <xs:element name="IsPersisted" type="RE:BooleanType" />
  </xs:all>
</xs:complexType>
```

2.2.44 DatabasePermission

RE:DatabasePermission is a complex type that specifies a computed column in a data-tier application. [<9>](#)

The following is the XML schema definition of the **RE:DatabasePermission** complex type.

```
<xs:complexType name="DatabasePermission">
  <xs:all>
    <xs:element name="PermissionState" type="RE:PermissionStateEnum" />
    <xs:element name="PermissionType" type="RE:PermissionTypeEnum" />
    <xs:element name="TargetObject" type="MM:ReferenceType" />
  </xs:all>
</xs:complexType>
```

2.2.45 DataType

Applies to DACPAC version 2009/08 [\[MSFT-REDACPAC200908\]](#) **and DACPAC version 2011/03** [\[MSFT-REDACPAC201103\]](#)

RE:DataType is a complex type that specifies all supported data types in a data-tier application.

The following is the XML schema definition of the **RE:DataType** complex type for version 2008/09 [\[MSFT-REDACPAC200908\]](#).

```
<xs:complexType name="DataType">
  <xs:choice minOccurs="1" maxOccurs="1">
    <xs:element name="SystemDataType" type="RE:SqlDataType" />
  </xs:choice>
</xs:complexType>
```

```

        <xs:element name="XmlDataType" type="RE:SqlDataType" />
        <xs:element name="ScalarDataType" type="RE:ScalarDataType" />
    </xs:choice>
    <xs:attribute ref="MM:ReferenceKey" use="optional" />
</xs:complexType>

```

The following is the XML schema definition of the **RE:DataType** complex type for 2011/03 [MSFT-REDACPAC201103].

```

<xs:complexType name="DataType">
    <xs:choice minOccurs="1" maxOccurs="1">
        <xs:element name="SystemDataType" type="RE:SqlDataType" />
        <xs:element name="XmlDataType" type="RE:SqlDataType" />
        <xs:element name="SystemCLRDataType" type="RE:SqlDataType" />
        <xs:element name="ScalarDataType" type="RE:ScalarDataType" />
    </xs:choice>
    <xs:attribute ref="MM:ReferenceKey" use="optional" />
</xs:complexType>

```

2.2.46 ExecutionContextType

RE:ExecutionContextType is a complex type that specifies the execution context in the EXECUTE AS clause in a data-tier application.

The following is the XML schema definition of the **RE:ExecutionContextType** complex type.

```

<xs:complexType name="ExecutionContextType">
    <xs:all>
        <xs:element name="ContextType" type="RE:ExecuteAsEnumeration" />
        <xs:element minOccurs="0" name="User" type="MM:ReferenceType" />
    </xs:all>
</xs:complexType>

```

2.2.47 IdentityType

Applies to DACPAC version 2009/08 [\[MSFT-REDACPAC200908\]](#) **and DACPAC version 2010/11** [\[MSFT-REDACPAC201011\]](#)

RE:IdentityType is a complex type that specifies the IDENTITY column in a data-tier application.

The following is the [2009/08] XML schema definition of the **RE:IdentityType** complex type [MSFT-REDACPAC200908].

```

<xs:complexType name="IdentityType">
    <xs:sequence>
        <xs:element name="Seed" type="xs:unsignedInt" />
        <xs:element name="Increment" type="xs:unsignedInt" />
    </xs:sequence>
</xs:complexType>

```

The following is the [2010/11] XML schema definition of the **RE:IdentityType** complex type [MSFT-REDACPAC201011]. This definition adds the **NotForReplication** option property.

```

<xs:complexType name="IdentityType">
    <xs:sequence>
        <xs:element name="Seed" type="xs:unsignedInt" />

```

```

    <xs:element name="Increment" type="xs:unsignedInt" />
    <xs:element name="NotForReplication" type="xs:BooleanType" />
  </xs:sequence>
</xs:complexType>

```

2.2.48 Permissions

Applies to DACPAC version 2011/03 [\[MSFT-REDACPAC201103\]](#)

RE:Permissions is a complex type that specifies a scalar-valued data type in a data-tier application. [<10>](#)

The following is the XML schema definition of the **RE:Permissions** complex type.

```

<xs:complexType name="Permissions">
  <xs:all>
    <xs:element name="DatabasePermission" type="RE:DatabasePermission" />
  </xs:all>
</xs:complexType>

```

2.2.49 ScalarDataType

RE:ScalarDataType is a complex type that specifies a scalar-valued data type in a data-tier application.

The following is the XML schema definition of the **RE:ScalarDataType** complex type.

```

<xs:complexType name="ScalarDataType">
  <xs:all>
    <xs:element name="Name" type="xs:string"/>
  </xs:all>
</xs:complexType>

```

2.2.50 SqlDataType

RE:SqlDataType is a complex type that specifies a common structure of data types in a data-tier application.

The following is the XML schema definition of the **RE:SqlDataType** complex type.

```

<xs:complexType name="SqlDataType">
  <xs:all>
    <xs:element name="Length" type="xs:unsignedByte" />
    <xs:element name="NumericPrecision" type="xs:unsignedByte" />
    <xs:element name="NumericScale" type="xs:unsignedByte" />
    <xs:element name="TypeSpec" type="xs:string" />
  </xs:all>
</xs:complexType>

```

3 Structure Examples

This section provides a sample XML in a data-tier application. A data-tier application consists of logicalobjectstream.xml and physicalobjectstream.xml to specify its management and relational engine model. The following sample consists of a subset of the pubs database to demonstrate the simple usage of a data-tier application. The pubs database can be downloaded from [\[MSFT-SSPS\]](#).

3.1 Pubs database (simplified)

The sample data-tier application XML creates [pubs] database with following objects.

- [pubs] database
- [employee] table in [dbo] **schema** and its columns
- [empid] user-defined datatype
- PrimaryKey on [emp_id] column
- Default Constraint on [job_id] column

3.2 Logical object sample

```
<?xml version="1.0" encoding="utf-8"?>
<MM:Instances
  xmlns:MM="http://schemas.microsoft.com/sqlserver/ManagementModel/Serialization/2009/08"

6 Appendix B: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include updates to those products.

- Microsoft SQL Server 2008 R2
- Microsoft SQL Server 2008 R2 DAC out-of-band release
- Microsoft SQL Server 2012
- Microsoft SQL Server 2014

Exceptions, if any, are noted in this section. If an update version, service pack or Knowledge Base (KB) number appears with a product name, the behavior changed in that update. The new behavior also applies to subsequent updates unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms "SHOULD" or "SHOULD NOT" implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term "MAY" implies that the product does not follow the prescription.

[<1> Section 2.1.1](#): The **SpatialIndex** element is not supported by SQL Server 2008 R2 and SQL Server 2008 R2 DAC out-of-band release.

[<2> Section 2.1.1](#): The **Statistics** element is not supported by SQL Server 2008 R2 and SQL Server 2008 R2 DAC out-of-band release.

[<3> Section 2.1.1](#): The **Synonym** element is not supported by SQL Server 2008 R2 and SQL Server 2008 R2 DAC out-of-band release.

[<4> Section 2.2.16](#): The **RE:SpatialIndex** element is not supported by SQL Server 2008 R2 and SQL Server 2008 R2 DAC out-of-band release.

[<5> Section 2.2.17](#): The **RE:Statistics** element is not supported by SQL Server 2008 R2 and SQL Server 2008 R2 DAC out-of-band release.

[<6> Section 2.2.19](#): The **RE:Synonym** element is not supported by SQL Server 2008 R2 and SQL Server 2008 R2 DAC out-of-band release.

[<7> Section 2.2.33](#): The **RE:GridDensity** type is not supported by SQL Server 2008 R2 and SQL Server 2008 R2 DAC out-of-band release.

[<8> Section 2.2.40](#): The **RE:MaxDopType** type is not supported by SQL Server 2008 R2 and SQL Server 2008 R2 DAC out-of-band release.

[<9> Section 2.2.44](#): The **RE:DatabasePermission** type is not supported by SQL Server 2008 R2 and SQL Server 2008 R2 DAC out-of-band release.

[<10> Section 2.2.48](#): The **RE:Permissions** type is not supported by SQL Server 2008 R2 and SQL Server 2008 R2 DAC out-of-band release.

7 Change Tracking

No table of changes is available. The document is either new or has had no changes since its last release.
